	Solution	Marks	Remarks
(b) (i)	Let $(h, 19)$ be the coordinates of $P$ . By (a), we have $h^2 + 19^2 = (40 - h)^2 + (30 - 19)^2$ . Solving, we have $h = 17$ .	1M	
	Let $x^2 + y^2 + Dx + Ey + F = 0$ be the equation of $C$ . Since $C$ passes through the origin, we have $F = 0$ . So, we have $17D + 19E + 650 = 0$ and $40D + 30E + 2500 = 0$ . Solving, we have $D = -112$ and $E = 66$ . Thus, the equation of $C$ is $x^2 + y^2 - 112x + 66y = 0$ .	1A 1M 1A	for either one $(x-56)^2 + (y+33)^2 = 65^2$
(ii)	Note that the equations of $L_1$ and $L_2$ are in the form		
	$y = \frac{3}{4}x + c$ , where c is a constant.		
	Putting $y = \frac{3}{4}x + c$ in $x^2 + y^2 - 112x + 66y = 0$ , we have		
	$x^{2} + \left(\frac{3}{4}x + c\right)^{2} - 112x + 66\left(\frac{3}{4}x + c\right) = 0$ .	1M	
	$25x^2 + (24c - 1000)x + 16c^2 + 1056c = 0$		
	Since $L_1$ and $L_2$ are tangents to $C$ , we have		
	$(24c - 1000)^2 - 4(25)(16c^2 + 1056c) = 0.$	1M	
	$16c^{2} + 2400c - 15625 = 0$ $(4c - 25)(4c + 625) = 0$		
	$c = \frac{25}{4}  \text{or}  c = \frac{-625}{4}$ Therefore the equation of $I$ and $I$		
	Therefore, the equations of $L_1$ and $L_2$ are		
	$y = \frac{3}{4}x + \frac{25}{4}$ and $y = \frac{3}{4}x - \frac{625}{4}$ respectively.	1M	for either one
	Note that the coordinates of $S$ , $T$ , $U$ and $V$ are $\left(\frac{-25}{3}, 0\right)$ ,		2
	$\left(0, \frac{25}{4}\right)$ , $\left(\frac{625}{3}, 0\right)$ and $\left(0, \frac{-625}{4}\right)$ respectively.		
	The area of the trapezium <i>STUV</i> $= \frac{1}{2} \left( \left( \frac{625}{3} \right) \left( \frac{625}{4} \right) + \left( \frac{625}{4} \right) \left( \frac{25}{3} \right) + \left( \frac{25}{3} \right) \left( \frac{25}{4} \right) + \left( \frac{25}{4} \right) \left( \frac{625}{3} \right) \right)$ $= \frac{105 625}{6}$	1M	$\frac{2(65)}{2} \left( \sqrt{\left(\frac{625}{3}\right)^2 + \left(\frac{-625}{4}\right)^2} + \sqrt{\left(\frac{-25}{3}\right)^2 + \left(\frac{25}{4}\right)^2} \right)$
	6 ≈ 17 604.16667		
	> 17 000 Thus, the claim is correct.	1A	f.t.
